

NARCIS: verified coverless signaling from unchanged natural images

Shared natural-image
index

Invariant neural
descriptor

Attack-qualified
balanced codebook

AES-GCM +
Reed–Solomon

Unchanged cover
sequence

The largest feasible alphabet is retained only when every protected-message symbol has sufficient attack-qualified covers

BOSSBase

1,050 / 1,050 recoveries
98.74% mean symbol accuracy

Caltech-101 RGB

525 / 525 recoveries
98.59% mean symbol accuracy

Selection-leakage audit

AUC 0.533 on seed 47
95% CI [0.517, 0.548]

Measured scope: five seeds per dataset, 21 channel conditions; net rate 0.184–1.213 bits/cover across tested payload sizes
