

NARCIS: verified coverless signaling from unchanged natural images

Largest feasible alphabet is selected only when every protected-message symbol has sufficient qualified covers

BOSSBase
1,050 / 1,050 recoveries
98.74% mean accuracy

Caltech-101 RGB
525 / 525 recoveries
98.59% mean accuracy

Selection CNN
AUC 0.515 / 0.530
95% CIs include 0.5

Measured scope: 5 seeds per dataset, 21 clean/calibration/holdout conditions, 3-4 operational bits per cover
